Description

This Standard sets out requirements for the construction, operation, performance and installation of intruder alarm equipment and systems installed in client's premises, up to and including alarm equipment and outgoing signalling facilities. Operating and maintenance procedures including administration of records are also included.

Scope

This Standard specifies the minimum requirements for the design, installation, commissioning, installation and maintenance of intruder alarm systems.

It classifies equipment and systems interconnected by wire and wire-free links. Such systems consist of detection devices, control equipment, warning and signalling devices, and the necessary power supply equipment.

This Standard does not cover the transmission of signals from the client's premises to a remote centre. It does not specify the extent or degree of protection to be provided, nor does it necessarily cover all the requirements for a particular installation.

NOTES:

1. See AS 2201.2 for monitoring centres.
2. AS 2201.5 for alarm transmission systems between client's premises and monitoring centres.
