Description

This Standard specifies a parametric method of calculation based on lognormal distribution for determining the mean and 5th percentile values for structural plywood from test results generated in accordance with AS/NZS 2269.1. Non-parametric methods may also be used. Based on EN 1058 and prEN 14358.

Note: This Standard does not provide design values. In the case of Australia and New Zealand, the values obtained in this Standard should be processed in accordance with AS/NZS 4063 for characteristic properties and AS 1720.1 or NZS 3603 for design values.
