Description

This Standard provides designers, manufacturers, installers and interested parties with performance-based design and construction requirements for solar and heat pump hot water supply systems.

Scope

This Standard specifies performance-based requirements for the design and construction of both components of solar and heat pump hot water supply systems, and complete systems, for household premises and for commercial and industrial installations comparable with household installations, intended to deliver drinking water of acceptable quality.

Systems may be supplied as packaged systems comprised of a complete set of matched components supplied from one source, or may be custom-built by assembling components from various sources on-site.

For assistance with locating previous versions, please contact the information provider.
