**Description**

This Standard provides requirements for testing rectangular section structural timber to provide data for the determination of characteristic values for structural design. It specifies the test methods only.

**Scope**

This Standard specifies test methods for measuring the structural properties of rectangular sections sawn solid timber of commercial structural size.

The objective of this Standard is to specify requirements for testing rectangular sections of sawn solid timber of commercial structural size to provide data for the determination of characteristic values for structural design. Design characteristic values are determined as specified in Part 2 of the AS/NZS 4063 series using the test results generated by the test methods specified in this Standard.

For assistance with locating previous versions, please contact the information provider.
