Description

This Standard provides for signs using a system of coded shapes and colours with symbols which pictorially describe hazards (i.e. signs for conveying safety instructions without relying on any 'text' message) and signs with text (words and numerals) messages (including recommendations for multi-lingual signs); accident prevention tags are also covered. The signs are classified as 'regulatory', 'caution' (warning), 'emergency-related information' (including fire signs).

All standard symbolic (pictorial) signs are reproduced in colour and examples are included, also in colour, of text-type signs. Photometric and colorimetric properties of the sign materials are dealt with, and recommendations on styles and sizes of sign lettering are included.

For assistance with locating previous versions, please contact the information provider.

Notes/comments

This Standard was also reproduced as NZS/AS 1319:1983 in New Zealand, and although superseded is available online from Standards New Zealand.
