Description

This Standard sets out general principles and recommendations for the lighting of interiors of buildings. It applies primarily to interiors in which work is undertaken and takes into account both electric lighting and daylight. The recommendations have the object of producing a visual environment in which essential task details are made easy to see and adverse factors which may cause visual discomfort are either excluded or appropriately controlled.

Scope

Recommendations for the lighting of particular interiors or activities are provided in the Standards which comprise AS 1680.2.

The Standard does not deal with lighting for the purposes of decoration, display, entertainment or sport.

Note: Attention is drawn to AS 2293.1 and AS 2293.2 which set out requirements for the lighting necessary to alleviate panic and to permit safe evacuation of the building occupants should this be required in the event of loss of the normal lighting.

For assistance with locating previous versions, please contact the information provider.
