Description

This Standard specifies methods and requirements for X-ray and gamma-ray radiographic testing of welded butt joints in metal products.

Scope

It does not cover neutron radiography and does not specify the permissible defect levels used for the acceptance/rejection criteria of welds. The individual methods of test and the permissible defect levels are specified in the relevant product or application Standard.

Advice and recommendations on information to be supplied by the purchaser at the time of enquiry or order are contained in Appendix A.

Guidance and general information which should assist the users of this Standard is contained in Appendix B.

For assistance with locating previous versions, please contact the information provider.
