Description

This Standard specifies the uniform minimum requirements for manufacturers, designers, regulatory authorities, testing laboratories and similar organizations for the safety, performance and use of automatic shut off valves and vent valves.

These automatic shut off valves and vent valves are intended for use with natural gas, town gas, tempered liquefied petroleum gas and liquefied petroleum gas.

Scope

These requirements apply to automatic shut off valves and vent valves up to 150 mm size for use on natural gas (NG), simulated natural gas (SNG), town gas (TG), tempered liquefied petroleum gas (TLP) and liquefied petroleum gas (LPG).

Compliance of a valve with these requirements does not imply that it is acceptable for use without supplemental tests in its intended application. Requirements for an automatic shut off valve or vent valve incorporated in a combination control are published in AS 4624.

Valves incorporated in thermoelectric flame safeguards and over-pressure and under-pressure cut off devices are published in AS 4620 and AS 4632 respectively.

Automatic valves that do not shut off completely are not covered by specific requirements except where they are incorporated as part of an appliance or system. Automatic valves incorporating electrical components shall comply with the requirements of the

appropriate electrical authority.
