Description

This Standard specifies requirements for the manufacture and grading of structural plywood. Specifications for both stress and surface grades are also provided. The Standard also specifies veneer qualities, bond quality, standard lay-up construction, dimensional tolerances, joints, moisture content and basic working stresses for the nominated stress grades.

The following alternative methods for the determination of stress grades for structural plywood, are also provided -

- (a) species identification;
- (b) density determination;
- (c) veneer stiffness determination;
- (d) mechanical stress grading of the finished sheet of plywood; or
- (e) in-grade testing of finished plywood panels.

Five surface grades, based on the veneer quality of the face and back veneers, A, S, B, C and D and one bond quality, Type A bond, are prescribed.

For assistance with locating previous versions, please contact the information provider.

Notes/comments

This Standard is superseded by AS/NZS 2269:2004, which is superseded by AS/NZS 2269.0:2008, which is superseded by AS/NZS 2269.0:2012

Table of Contents

Section 1 Scope And General

1.1 Scope

1.2 Application

1.3 Referenced Documents

1.4 Definitions

1.5 Grades Of Structural Plywood

1.6 Dimensions And Shape

1.7 Moisture Content

1.8 Finish

1.9 Joints In Sheets

1.10 Immunization And Preservative Treatment

1.11 Branding

Section 2 Veneer Quality

2.1 General Requirements For All Veneers

2.2 Quality A Veneer

2.3 Quality S Veneer

2.4 Quality B Veneer

2.5 Quality C Veneer

2.6 Quality D Veneer

Section 3 Manufacturing Requirements

3.1 Joints In Veneer

3.2 Structural Joints In Plywood sheets

3.3 Bonding between Plies

3.4 Assembly Of Plywood

Section 4 Application Of Stress Grades And Mechanical Properties To Structural Plywood Panels

4.1 General 4.2 Veneers Of Identified Species

4.3 Veneers Of Determined Density

4.4 Veneers Of Determined Stiffness

4.5 Mechanically Stress-Graded Structural Plywood Sheets

4.6 In-Grade Testing

4.7 Capacity Or Dependable Strength Of Plywood

Appendices

A Section Properties, Second Moment Of Area (Moment Of Inertia) And Section Modulus For Structural Plywood

B Stress Grades For Veneer Of Identified Species

C Method For Mechanically Stress Grading Plywood Panels

D Information To Be Supplied With Inquiries And Orders

E Storage And Handling Of Structural Plywood

F Means For Demonstrating Compliance With This Standard
