Description

This part of EN 10246 specifies the requirements and the acceptance levels for magnetic particle inspection of seamless and welded ferromagnetic steel tubes for the detection of surface

imperfections.

This part of EN 10246 is to be used for the detection of surface imperfections on the entire or any part of the outer surface of tubes, excluding the end bevel/face.

In addition, this standard may be used, as appropriate, to locate the position of external surface imperfections, detected by another non-destructive testing method, e.g. ultrasonic, prior to dressing of the tube surface and to ensure complete removal of the imperfection after dressing is complete.

For assistance with locating previous versions, please contact the information provider.

Notes/comments

BS EN 10246-12:2000 is the British Standards version of the European Standard and is referenced as the English language version applicable to this International Standard.
