Description

EN 115-1 defines safety requirements for escalators and moving walks in order to safeguard people and objects against risks of accidents during installation, operation, maintenance and inspection work.

Scope

EN 115-1 applies to new escalators and moving walks (pallet or belt type) and deals with all significant hazards, hazardous situations and events relevant to escalators and moving walks when they are used as intended and under conditions of misuse which are reasonably foreseeable.

It does not deal with hazards arising from seismic activities and is not applicable to escalators and moving walks which were manufactured before the date of its publication as EN. It is, however, recommended that existing installations be adapted to this Standard.
