Description

This part of BS EN 752 sets out design for hydraulic and considerations for the environment.

This European Standard is applicable to drain and sewer systems, which operate essentially under gravity, from the point where the sewage leaves a building or roof drainage system, or enters a road gully, to the point where it is discharged into a treatment works or receiving water.

Drains and sewers below buildings are included provided that they do not form part of the drainage system of the building.

For assistance with locating previous versions, please contact the information provider.

Notes/comments

BS EN 752-4:1998 is the British Standards version of the European Standard and is referenced as the English language version applicable to this International Standard.
