## CP 101:1972 Foundations and substructures for non-industrial buildings of not more than four storeys

[View on Information Provider website](#)

### Abbreviation

CP 101:1972

### Valid from

15/05/1972

---

### Information provider

British Standards Institution

### Author

British Standards Institution

### Information type

Code of Practice

### Format

PDF

---

### Cited By

[This resource is cited by 1 document \(show Citations\)](#)

---

### Description

This Standard relates to buildings not more than four storeys high and of such a type that the foundation loads are dispersed evenly on the ground. Includes information on site exploration, effects of weather, ground movement, bearing capacities and the selection and design of the appropriate type of foundation. Includes a table of typical bearing capacities for different types of rock and sand. Reference is made to vibroflotation.

For assistance with locating previous versions, please contact the information provider.
