### Description

This method is for testing and evaluation of the capacity of systems to support vertical loads from aluminium window and/or door joinery frames.

### Scope

The method may only be used for systems supporting aluminium window and/or door joinery frame units which comply with NZS 4211:2008. The results are only applicable to support systems installed in timber framed buildings which are within the scope of NZS 3604:2011 and which incorporate drained cavities (including brick veneer construction) complying with E2/AS1
