Description

This standard describes the general physical and chemical methods for testing natural and synthetic rubber products for conformance with the requirements of Federal specifications. It was prepared in order to eliminate unnecessary or undesirable variations in the general sampling and testing procedures.

Scope

This standard does not include special test methods applicable to certain natural and synthetic rubber products that are described in the appropriate detail specification, nor does it include all the test methods for natural and synthetic rubber materials used in industry. In case of conflict between the provisions of these methods and those of the individual test procedures in specifications for particular materials, the latter shall take precedence.

For assistance with locating previous versions, please contact the information provider.

Notes/comments

Note: Users downloading from the Everspec website will need to scroll through the PDF to find Test Method 8311 as FED-STD 191A contains all the relevant Tests in this 601 Standard.
