## ISO 13783:1997 Plastics piping systems - Unplasticized poly(vinyl chloride) (PVC-U) end-load-bearing double-socket joints - Test method for leaktightness and strength while subjected to bending and internal pressure

[View on Information Provider website](#)

### Abbreviation

ISO 13783:1997

### Valid from

28/08/1997

---

### Information provider

Standards New Zealand

### Author

International Organization for Standardization

### Information type

ISO Standard

### Format

PDF

### Description

This standard specifies a method for testing, while subjected to bending, the leaktightness and strength of assembled end-load-bearing double socket joints of unplasticized poly(vinyl chloride) (PVC-U) which allow a maximum angle of deflection of 3.

It is applicable to double socket couplers provided with elastomeric sealing rings and locking rings and intended for use with PVC-U pressure pipes (see figure 1).

The method specifies the internal pressure, the method of calculation for the additional bending force and the procedure for the bending test.
