Description

Provides specifications for those responsible for designing, constructing, maintaining, and/or managing tracks and outdoor visitor structures. Use of these specifications will ensure that tracks and outdoor visitor structures provide the right level of service to meet visitor recreation and safety needs, and will help protect the facilities and the environment from damage.

Scope

This document provides performance specifications for tracks and outdoor visitor structures and provides a consistent framework for those responsible for the design, construction, maintenance and/or management of tracks and outdoor visitor structures.

Also covered are the basic requirements for on-site or off-site information concerning tracks and their current condition. Roadend/roadside facilities such as toilets and carparks, and backcountry accommodation are not included within the scope of this Handbook.

The Handbook provides specifications for tracks suitable for use by cyclists/mountainbikers and walkers, but it does not include tracks that are designed and constructed specifically for mountain-biking.

For assistance with locating previous versions, please contact the information provider.
